NEW

added length and more protection to keep you dry longer

Made of moisture-repellent FABRIC 450°, the new, longer BARRIER® Ultra Protection Gown gives the protection you need during very wet procedures. A polyethylene film bonded between two layers of FABRIC 450° prevents strike-through in the sleeves and from the abdominal area to the bottom of the gown, thus helping to eliminate bacterial migration.

The added length of the gown provides full frontal coverage even when you're sitting. The side-tie belt allows freedom of movement while the adjustable neck closure and inside tie prevent gapping in back and blousing in front.

The single-use BARRIER Ultra Protection Gown, constructed of soft, linen-like FABRIC 450°, is designed to meet the demands of very wet surgical procedures.
